

# Stressed over HIPAA?

## Avoid costly regulatory fines and lawsuits with digital records and automation

The Health Insurance Portability and Accountability Act of 1996 (HIPAA) is a federal law that requires healthcare providers and companies to keep patient information confidential, secure and readily available. In 2023, more than a dozen healthcare providers paid fines ranging from \$3,500 to \$875,000 to settle HIPAA enforcement actions.<sup>1</sup>

Digital information management systems provide fast secure handling of the information protected by the law.

Information management systems enable you to:

- Retrieve and securely share records within the HIPAA 30-day access rule.
- Keep Protected Health Information (PHI) secure while in storage or transmission.
- Properly dispose of PHI using automated document retention/destruction schedules.

## Stay in compliance while working from anywhere

Remote workers aren't exempt from HIPAA. Healthcare providers and insurers are required to identify and mitigate security risks associated with off-site access and use of PHI.<sup>2</sup>

Information management provides secure access using virtually any device from anywhere, whether on site or providing telehealth services or other duties away from the office.

## Integrate securely with EHRs and business applications using PaperVision®

PaperVision information management integrates seamlessly with EHRs to give you the control and security over information as required by HIPAA:

1. Paper files such as archived patient records (including doctor's notes) and patient letters are safely digitized and added to the PaperVision information management system for organization and storage.
2. E-Forms, emails and other electronic documents are collected, organized and stored in the same system.
3. Secure information management blocks unauthorized internal and external access and keeps detailed audit trails.

# Digital records make HIPAA compliance easy.

## Retrieve records from anywhere

Today, one of the most common HIPAA enforcement actions is failure to release patient information within the 30-day limit. With PaperVision, files can be accessed from anywhere and transmitted in seconds.

"Now when anyone needs to access a patient's file they can do so immediately. Improving access to patient records helps us ensure we're providing the best patient care." - Jennie Sullivan, CEO, Wray Community Hospital [Read more >](#)

## Safeguard patient privacy with advanced end-to-end security

Avoid costly HIPAA fines and penalties by storing and transmitting information securely 24/7 with encryption, multifactor authentication, password permissions and more. Only authorized users can access sensitive information and you can:

- Manage records safely in the cloud with a SOC 2-certified system.
- Ensure data privacy using 256-bit AES encryption during transmission and at rest.
- Disaster proof records by managing PHI in the cloud.

"PaperVision delivers "ironclad document security and compliance."  
- Keypoint Intelligence [Read more >](#)

## Reduce costly record-handling expenses and penalties

"We are better able to comply with HIPAA because vulnerable information is no longer just sitting in drawers. This has saved us more than \$259,000 annually! -Mary Peelan, Director of Health Information Services, Mental Health Center of Denver [Read more >](#)

### About Digitech Systems:

For more than 26 years, Digitech Systems has pioneered information management technology such as cloud content management, automated workflows and intelligent data extraction. Digitech Systems introduced one of the world's first cloud information management systems in 1999.

### Awards:
